On Empathy and Data

_crowdsourced mental maps

Alexander Dunkel, UT Dresden,
Landscape Architecture and Environmental Planning

Perception – Landscape

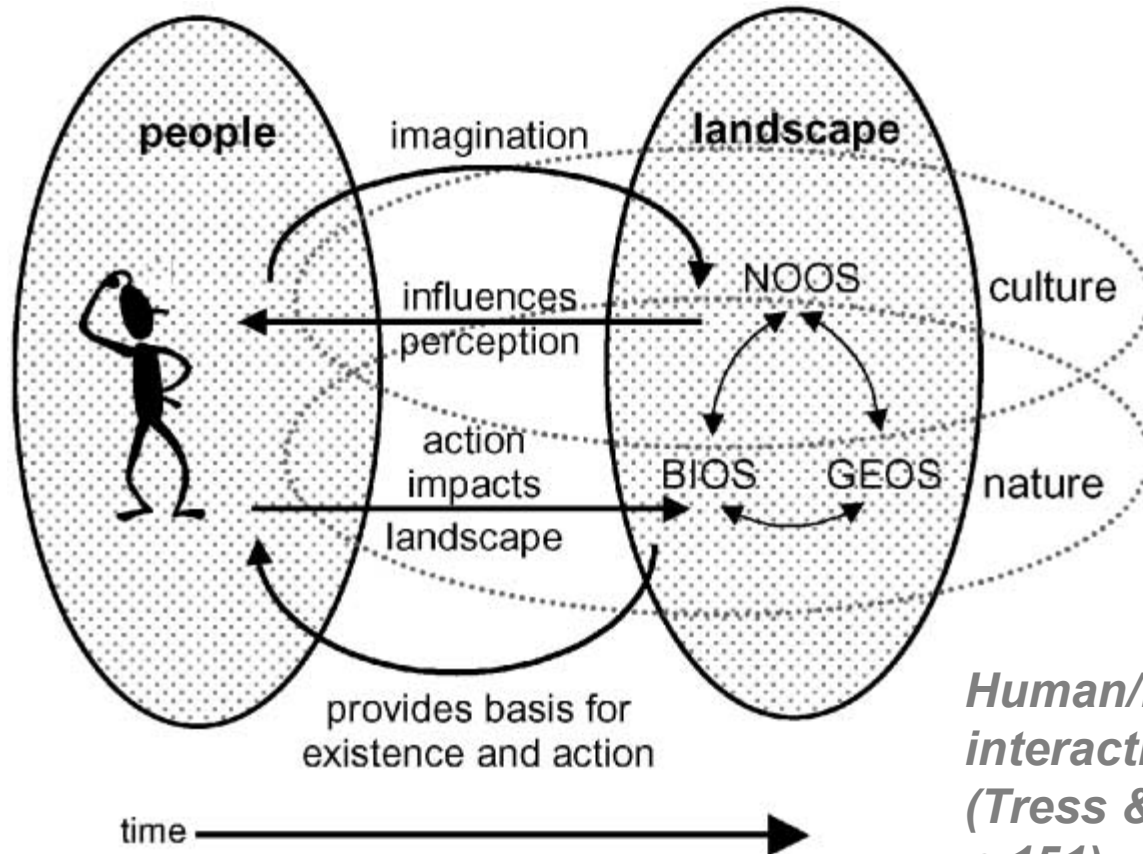

EU Landscape Convention:
landscape “as a zone or area **as perceived by local people
or visitors**” (ELC art. 1, para. 38).

importance of the *visual* sense

*“We use all our senses to analyse our surroundings, **particularly sight, which fulfils 87 per cent of our sensory perception.**” (Bell, 2012, p.16; p.40)*

The challenge:

Seeing and cognitive processing of what was seen can not be separated

*Human/landscape
interaction model
(Tress & Tress, 2001;
p.151)*

„... the image of a given reality may vary significantly between different observers.“

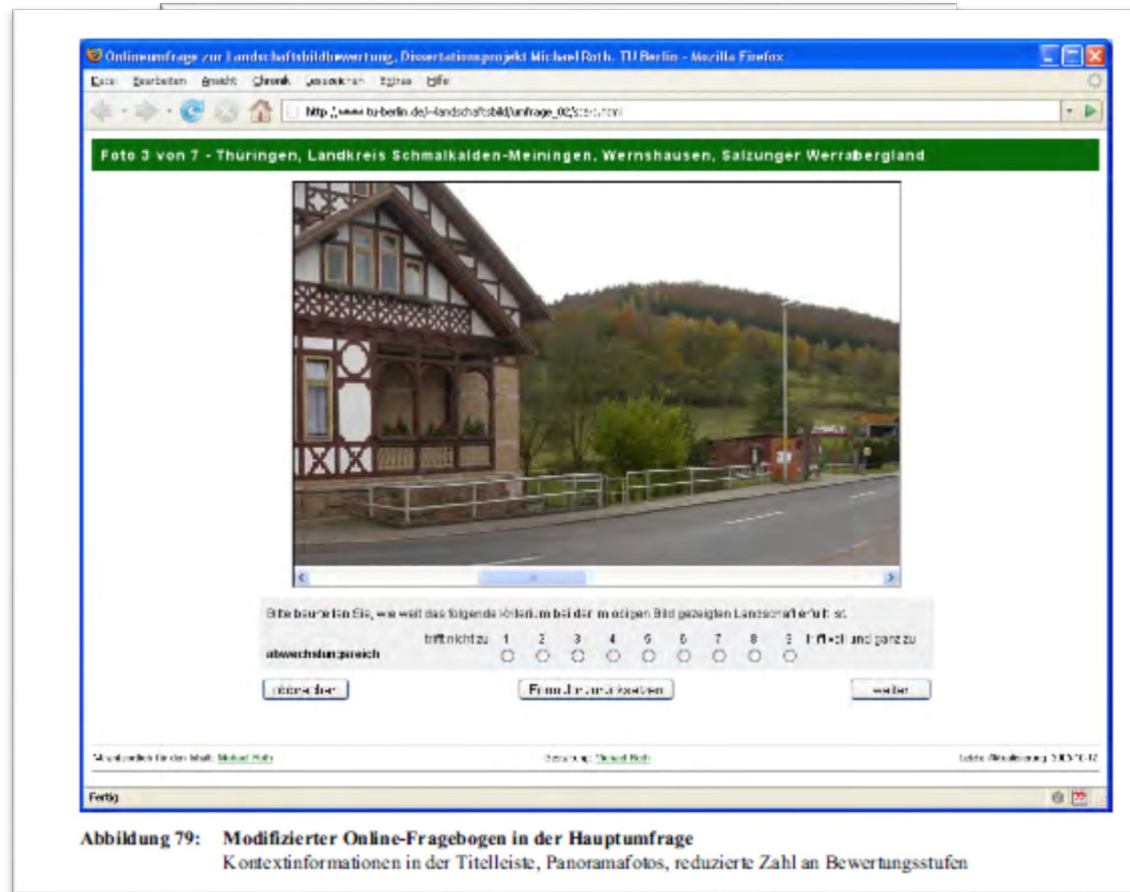

„Each individual creates and bears his own image,
**but there seems to be substantial agreement among
members of the same group.“**

→ „Group Images“ → „the **Public Image**“

= „... common mental pictures carried by large numbers of a city's inhabitants.“

1960: Urban Planner Kevin Lynch (The Image of The City)

theory and practice

Ratings acquired from (online) photographs (Roth, 2012)

Ratings acquired from photographs (Shafer & Richards, 1974)

**Visualization of georeferenced Flickr (red) and Twitter (blue) data
for Europe.**

Eric Fischer, 2011.

Taking photos and sharing them online:

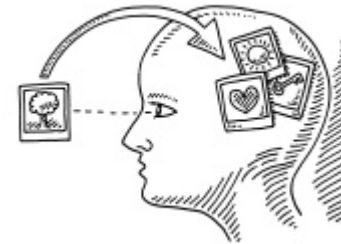

A sequence of cognitive abstraction
and filtering processes

**1: Select interesting
subjects**
[Visual interestingness]

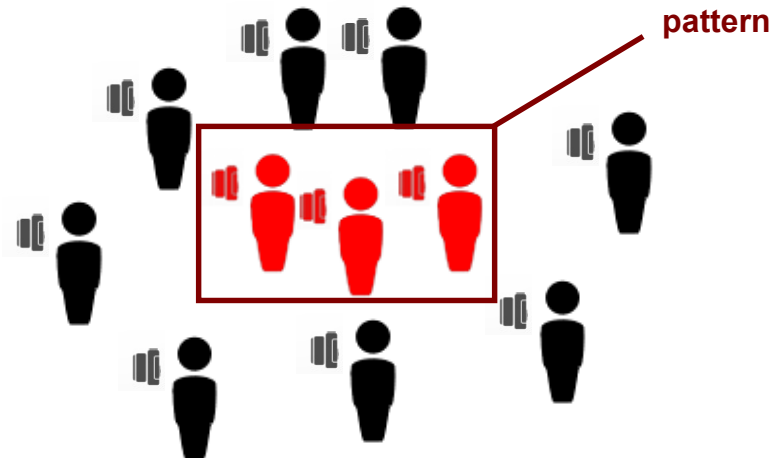

**2: Sharing some
photos online**
[Relevance]

**3: Tag and describe some
good ones; tag only what
is remembered/important**
[Memory/Generalization]

Finding patterns across groups or subgroups of people

Flickr photo data:

Time (of photo taking/Upload time)

→ **Temporal patterns**

Location (Geotag)

→ **Spatial patterns**

Attributes (Tags)

→ **Attribute patterns**

User information (origin etc.)

→ **User Group patterns**

Views (Interestingness for others)
