# MANPAGE – SPARTANMC-HEADERS(7)

## NAME

spartanmc-headers – SpartanMC header files for firmware development

## DESCRIPTION

The various functions implemented in the SpartanMC C library (see *spartanmc-libs*) are defined in a number of header files located at **spartanmc/include/**. This path is part of the standard include path of the SpartanMC-GCC. The following sections describe use and organization of the header files.

## LIBRARY HEADER FILES

The following header files define general support functions and macros as well as support functions for access peripheral components:

|                     |  |
|---------------------|--|
| <b>bitmagic.h</b>   | Macros for bit manipulation such as set/clear/toggle bit at a certain memory location.   |
| <b>ddr.h</b>        | Support functions for the MCB (Memory Controller Block) in Xilinx devices (mcb_peri_interface). Requires <i>libperi</i> .                      |
| <b>interrupt.h</b>  | Support functions for interrupt controller peripheral (intctrl, intctrl_p). Requires <i>libinterrupt</i> or <i>libinterrupt_p</i> .            |
| <b>led7.h</b>       | Support functions for a 7-Segment Display connected to the SFR_LEDS special function register of the processor core. Requires <i>libperi</i> . |
| <b>mul_high.h</b>   | Support function to access the high order word (bits 19-36) of a multiplication.   |
| <b>sleep.h</b>      | Function to delay execution by a certain number of clock cycles.   |
| <b>stdint.h</b>     | Integer type definitions.  |
| <b>stdio.h</b>      | Standard input/output functions such as printf.  |
| <b>stdio_uart.h</b> | Support functions to use UART with stdio functions.  |
| <b>stepper.h</b>    | Support functions for stepper motor peripheral (microstepper). Requires <i>libperi</i> .   |
| <b>string.h</b>     | String and memory operations.  |
| <b>uart.h</b>       | Support functions for UART peripherals (uart, uart_light). Requires <i>libperi</i> .   |
| <b>usb.h</b>        | Support functions for USB11 peripheral (usb11). Requires <i>libperi</i> .  |

## GENERATED PROJECT HEADER FILES

To allow easy access to the hardware components of any generated system there are a number of header files generated by the system builder *jConfig*. For details, see **peripherals.h** and **hardware.h**.

## FILES AND DIRECTORIES

|   |   |
|---|---|
| <b>spartanmc/<br/>include/</b>                  | Header files for peripheral support functions                                     |
| <b>spartanmc/<br/>include/<br/>peripherals/</b> | Header files defining structures and bit constants for peripheral register access |
